

I wish to register my objection to the LEAPS project. It is my opinion that this project will negatively impact the Cleveland National forest treeline with power transmission lines, which are an extreme fire hazard for those residences nearby. Fire-fighting in this area is extremely difficult as it is, and with the addition of power lines there will be even more danger from fires with the resulting loss of forest, animal life, and possibly even homes and human lives. In addition to the fire danger, the danger from EMF from the power lines is also a hazard to those living nearby. The health hazards from EMF has been investigated and has been found to cause serious health issues including cancer. These are but few of the negative impacts to human and animal life that the LEAPS project will cause.

Individuals and groups have been fighting against LEAPS for several years and this negative project continues to come back again and again. This project needs to be stopped, absolutely and completely. Please register my strong objection to LEAPS.
